

## GENERAL

<b>SCHOOL</b>	Engineering		
<b>ACADEMIC UNIT</b>	Mechanical Engineering		
<b>LEVEL OF STUDIES</b>	Undergraduate		
<b>COURSE CODE</b>	MY3210	<b>SEMESTER</b>	7 <sup>th</sup>
<b>COURSE TITLE</b>	Failure Analysis		
<b>INDEPENDENT TEACHING ACTIVITIES</b> <i>if credits are awarded for separate components of the course, e.g. lectures, laboratory exercises, etc. If the credits are awarded for the whole of the course, give the weekly teaching hours and the total credits</i>		<b>WEEKLY TEACHING HOURS</b>	<b>CREDITS</b>
Lectures		5	6
<i>Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).</i>			
<b>COURSE TYPE</b> <i>general background, special background, specialized general knowledge, skills development</i>	Special background		
<b>PREREQUISITE COURSES:</b>			
<b>LANGUAGE OF INSTRUCTION AND EXAMINATIONS:</b>	Greek		
<b>IS THE COURSE OFFERED TO ERASMUS STUDENTS</b>	No		
<b>COURSE WEBSITE (URL)</b>	<a href="https://mic.uth.gr/?page_id=18404&amp;lang=en">https://mic.uth.gr/?page_id=18404&amp;lang=en</a>		

Learning outcomes
<p>One of the main objective of the course is to familiarize the students with the fundamental concepts of failure analysis procedure and to provide an insight view on how the materials behave in real industrial conditions. Thus, this course provides a description on the most expected material failures (Corrosion, High temperature, Mechanical failures) supported by real examples - case studies from industry- that are presented and analyzed both theoretically and in the laboratory.</p> <p>At the end of the course the student should be able to:</p> <ul style="list-style-type: none"> <li>• Classify the main failure mechanisms.</li> <li>• Identify engineering problems</li> <li>• Understand and describe the mechanisms beyond the macroscopic failure</li> <li>• Suggest testing methodologies to analyze and understand the root cause of a specific failure.</li> <li>• Determine the root cause(s) and recommend corrective actions.</li> </ul>
General Competences
<ul style="list-style-type: none"> <li>• Working independently.</li> <li>• Decision making</li> <li>• Team work</li> <li>• Search analysis and synthesis of collected data and information</li> </ul>

## SYLLABUS

The course is focused on the failure analysis of mechanical engineering components and structures. Main failure mechanisms are reviewed and analyzed. The course is based on two pillars: Lectures and laboratory classes on a weekly basis.

1. Mechanisms, causes and analysis of failures.
  - Introduction
  - Overview of failure mechanisms
  - Causes of failures
  - Methodology of failure analysis
2. Corrosion failures:
  - Uniform corrosion,
  - Galvanic corrosion,
  - Pitting, crevice,
  - Selective corrosion
  - Stress corrosion cracking
  - Hydrogen embrittlement
3. High Temperature Failures:
  - Oxidation
  - Carburization
  - Metal dusting
  - Thermal Shock
  - Sulfidation
  - Fuel Ash corrosion
4. Mechanical Failures:
  - Creep
  - Fatigue
  - Wear
  - Plastic deformation
  - Brittle fracture
  - Corrosion Fatigue
5. Effects on engineering design.
  - Design to optimize resistance to: fatigue, creep, corrosion

### Laboratories:

1. Example of failure due to Galvanic Corrosion.
2. Example of failure due to Pitting Corrosion.
3. Example of failure due to Crevice Corrosion.
4. Example of failure due to Stress Corrosion Cracking.
5. Example of failure due to Hydrogen Embrittlement.
6. Example of failure due to Hot Corrosion.
7. Example of failure due to Thermal Shock.
8. Example of failure due to Sulphidation.
9. Example of fatigue failure. Laboratory analysis.
10. Example of failure due to brittle fracture.
11. Example of Creep Failure. Basic Creep Calculations.

## TEACHING and LEARNING METHODS - EVALUATION

<b>DELIVERY</b> <i>Face-to-face, Distance learning, etc.</i>	Face-to face
<b>USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY</b>	Parts of the course material are presented using ICT Course support material is provided through the UTH e-Class online platform, Search for case studies online

Use of ICT in teaching, laboratory education, communication with students											
<b>TEACHING METHODS</b> <i>The manner and methods of teaching are described in detail.</i> <i>Lectures, seminars, laboratory practice, fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art workshop, interactive teaching, educational visits, project, essay writing, artistic creativity, etc.</i> <i>The student's study hours for each learning activity are given as well as the hours of non- directed study according to the principles of the ECTS</i>	<table border="1"> <thead> <tr> <th>Activity</th><th>Semester workload</th></tr> </thead> <tbody> <tr> <td>Lectures</td><td>70h</td></tr> <tr> <td>Laboratory Exercises</td><td>35h</td></tr> <tr> <td>Exercises</td><td>45h</td></tr> <tr> <td><b>Total</b></td><td><b>150h</b></td></tr> </tbody> </table>	Activity	Semester workload	Lectures	70h	Laboratory Exercises	35h	Exercises	45h	<b>Total</b>	<b>150h</b>
Activity	Semester workload										
Lectures	70h										
Laboratory Exercises	35h										
Exercises	45h										
<b>Total</b>	<b>150h</b>										
<b>STUDENT PERFORMANCE EVALUATION</b> <b>Description of the evaluation procedure</b> <i>Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open- ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other</i> <i>Specifically-defined evaluation criteria are given, and if and where they are accessible to students.</i>	<p>Language of evaluation: Greek</p> <p>Methods of evaluation: Student assessment is based on a set of written individual assignments (30%), a set of laboratory individual assignments (20%) and a written final exam (50%).</p>
